Acronis Suite

Storage, Back UP and DR in one console

 **TIM**

Acronis Suite

Reliable cloud storage, backup and recovery solution for businesses of all sizes. It protects a company's critical data assets with a single, efficient solution managed through a single, intuitive console.

Service features

Assurance
Trouble ticket resolution time within
8 hr working time.

Who is it for?

The service is for all operators who manage company data assets on their own and their customers' behalf and intend to implement safeguarding and protection policies, apply storage and backup solutions, and comply with European directives concerning Privacy (GDPR).

Acronis Suite service description

Storage, reliable backup and recovery, and disaster recovery solutions for companies of all sizes. Protect all your business-critical systems - physical, virtual and cloud - with a single, efficient, enterprise-wide backup solution, managed via a single, intuitive console

Specifically developed for business environments of all sizes, Acronis provides the best data protection and fast, flexible disaster recovery for all systems in the environment, regardless of their complexity.

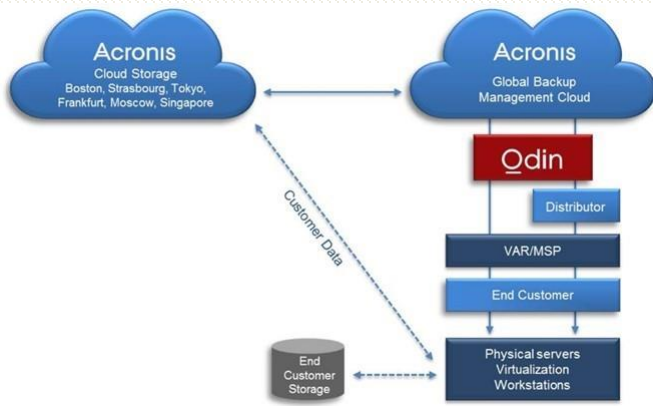

A business grade cloud storage solution;
•A complete backup solution that supports any type of system: virtual machines, physical servers, applications, workstations and much more;

- A unique backup technology that acquires an entire system, physical or virtual, in one quick step;
- Ultra-rapid recovery ensures a return to operation in minutes rather than hours;
- The flexibility of data recovery allows you to restore everything from a single file to an entire server;
- Universal Restore technology enables the entire system to be restored to any location, even on new or different hardware;
- Multi-destination support allows you to store your data backup wherever you want (including the [Acronis cloud](#));
- Intelligent backup functions significantly reduce network consumption and storage costs.
- For the most demanding, a disaster recovery solution to ensure business continuity

Acronis Suite

CREATE YOUR IDEAL BACKUP SOLUTION

Supported by Acronis AnyData™ technology, Acronis Backup Advanced can protect any data in any environment or location. It protects physical Windows and Linux servers, VMware, Hyper-V, Xen, RHEV, KVM and Oracle VM virtual servers, as well as Microsoft Exchange, SQL, SharePoint, and Active Directory, even if these systems are offsite. Regardless of configuration, Acronis Backup Advanced protects everything you need to protect, now and always!

Simplified management

Acronis Suite allows you to manage and monitor your entire environment's backup activities through one centralised management console, which gives you a quick overview of all your backups and thus reduces management work.

Hardware failures are no longer a problem

Universal Restore technology enables the entire system to be restored to new or different hardware with zero complexity. To avoid the need to locate a machine of the same model/manufacturer or operating system, you can restore the entire disc image on any hardware with just a few clicks.

Universal Restore

Now included in all Acronis Backup products, this unique data recovery technology offers the ability to restore backups to any machine, regardless of platform instantly. Now you can recover files, configurations, applications or an entire system on the same hardware, on different hardware or a virtual server, all in a few simple mouse clicks!

Disc image technology

Disc-level snapshots save complete images of a disc or volume in a single, simple pass (including operating system, applications and data). This technology works for both physical and virtual machines.

Centralised management

The centralised, unified dashboard allows you to manage all backup operations for physical and virtual machines from one central location. You define and assign backup plans for one or more machines, review status updates and receive alerts from a single console.

Acronis Suite

Protecting business applications

Patented disc imaging technology enables continuous backups of running applications. Microsoft Exchange, SQL Server, SharePoint and Active Directory data can then be backed up at any time. Granular element recovery avoids disconnecting systems, eliminating costly downtime for the business.

Compression and deduplication

It reduces costs and data movement, efficiently utilises network and storage infrastructure with source and destination deduplication and compression functions.

Multiple backup destinations

It stores backups in up to five different locations, locally and in the cloud, for more flexible and reliable recovery. Combine local disks, connected storage resources, tape, network storage and/or cloud locations to reduce storage costs and take advantage of multiple disaster recovery options.

Acronis Backup to Cloud

Acronis Backup Advanced provides access to secure offsite storage in the Acronis cloud. Simply add a subscription to your purchase to strengthen your backup plan and adopt hybrid data protection, on-premises and in the cloud.

Purchase

If you want to buy the service for yourself or become a reseller:

- access the [WholesaleDigitalStore](#) site
- fill in the [form online](#)

If you are already our customer, you can easily purchase the service by accessing the Wholesale Cloud Automation platform.
