Multiphone Conference

Audio bridge always ON

Multiphone Conference

Traditional telephony still has some life left in it. An audio bridge that is always active and can be reached from any telephone without an internet connection, PC or smartphone.

Service features

Assurance

Trouble ticket resolution time within 8 hr working time.

Who the service is for

The service is for all operators wishing to include value-added and low-cost services in their connectivity offers.

Multiphone Conference service description

For all companies, whatever their size, a professional audio-conferencing service is important. With Multiphone Conference, you can save time and money on in-person meetings with colleagues, co-workers or customers.

Conference calls, or audio conferences, are easy to organise, cheap and effective: with private access codes, you can activate conferences 24/24 and 7/7, without any reservation.

With a simple phone call, your callers will be able to join the conference immediately, either from home or abroad. No need to be connected to the Internet, no need to use a computer, no need to install software or devices

The service is designed for companies needing to manage the simultaneous telephone communication of many participants (mobile and fixed) independently and without having to invest in the purchase of geographical numbers.

The **MultiPhone Conference** solution allows you to quickly organise conference calls by simultaneously bringing together up to 50 connected phone devices.

It is **pre-configured** and easy to manage, does not require IT management skills and allows access from any telephone device.

What the service offers

For each subscription:

- a telephone number (telephone bridge) is assigned to which all participants can connect
- an email is sent to the user ('host user') who requested the service it contains:
- Telephone number
- PIN Host
- PIN Guest

Multiphone Conference

The service can be used immediately.

- **Conference activation:** the 'host' user calls the telephone number and enters the 'HOST' PIN, thus activating the communication channel.
- **Guest participation in the conference:** the 'guest' user, who has received the bridge telephone number and the 'guest' PIN from the host user, enters the conference room by calling the telephone number and entering the 'guest' PIN.
- **Conference deactivation:** The conference is automatically deactivated when the host user ends the call.

Advantages of the service

In a world of work that will increasingly be remote 'smart working', the multi-phone conference solution coexists with the more typical videoconferencing systems such as Skype, Zoom, Hangout, meeting the needs of the 'device divide'.

All you need is a telephone to use the service.

Buy the service directly online!

If you want to buy the service for yourself or become a reseller:

- access the [WholesaleDigitalStore](#) site
- fill in the [form online](#)

If you are already our customer, you can easily purchase the service by accessing the Wholesale Cloud Automation platform.
